ABOUT ME

Backend Software Engineer focused on building scalable, reliable systems with clear architecture and long-term maintainability in mind. I enjoy turning complex requirements into simple, well-structured solutions and writing code that is easy to reason about under growth and change.

EDUCATION

DAFFODIL INTERNATIONAL UNIVERSITY

B.Sc in Software Engineering

EXPERIENCES

(2021-Present)

Data Savvy Inc. (USA Based Startup)

BACKEND DEVELOPER

Bigtopa

<https://app.bigtopa.com>

Built and maintained a multi-tenant backend (tenant-scoped data, Cognito auth, AppSync pipeline resolvers) for chat, spaces/rooms, DMs, meetings, blogs, and project tooling. Implemented event-driven notifications (EventBridge → Lambda processors → external notification service + Pusher) with support for in-app, web-push, and meeting-specific flows. Worked in TypeScript with AWS CDK for IaC, MongoDB/Mongoose for domain data, and Lambda services behind AppSync.

Doerfy

<https://dev.doerfy.com>

Designed and maintained a monorepo GraphQL backend using GraphQL Yoga, TypeGraphQL, and Express, exposing a single /graphql endpoint with schema-first resolvers across 50+ feature domains (tasks, goals, stories, collaboration, content, subscriptions, notifications, admin, etc.).

Blending101

<https://app.blending101.com>

Blending Recipe is a Node.js GraphQL API for a nutrition and recipe platform: recipes, ingredients, nutrients, member content, planning, and related CMS-style features, backed by MongoDB and exposed over Apollo / type-graphql.

(2019-2020)

Stack Learner ([/www.stacklearner.com](http://www.stacklearner.com))

PROGRAMMING TRAINER

-Delivered programming training through the SL3 framework, enabling non-CS learners to quickly grasp core development concepts.

-Designed and delivered a TypeScript video course on YouTube (Stack Learner), simplifying core concepts for new programmers. ([Typescript All You Need to Know](#))
